OPEN API

EASY ERS MANAGEMENT

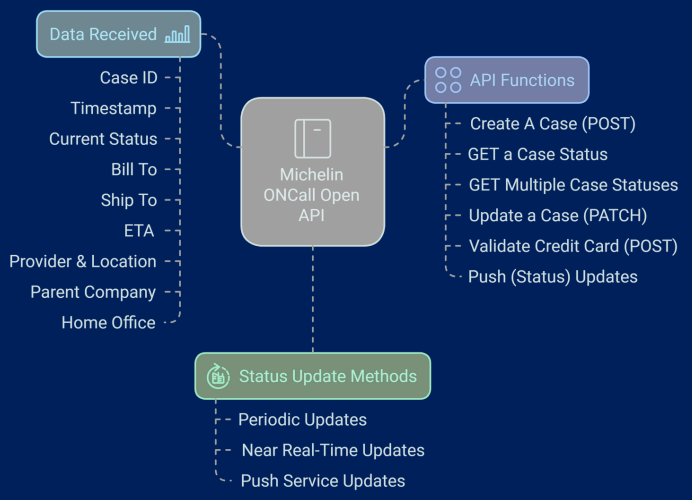
STREAMLINE OPERATIONS AND ENHANCE COMMUNICATION BETWEEN OUR SYSTEMS AND YOURS.

MICHELIN ONCALL OFFERS AN OPEN REST API THAT LETS DEVELOPERS ACCESS THE ONCALL SERVICE THROUGH A PROGRAMMATIC INTERFACE.

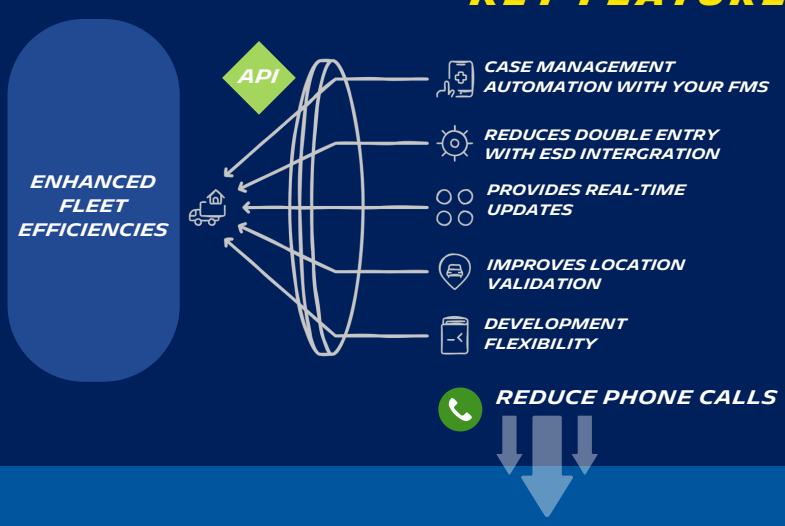
WHAT IS AN API?

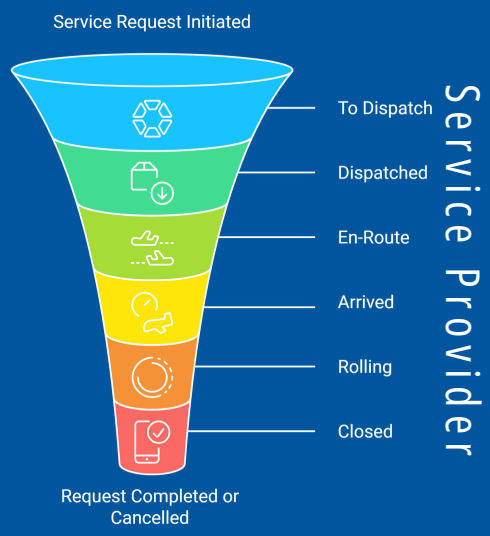
It's an Application Program Interface that allows to communicate and share DATA over the internet

REST API stands for Representational State Transfer Application Programming Interface. It allows systems to communicate efficiently using standard HTTP methods like GET and POST, making it lightweight and easy to integrate.



KEY FEATURES



HOW THIS WORKS


- Client shares a URL to send API "calls."
- An API Key is used for secure authentication, based on Bill To and Ship To information.
- The system validates required info (phone number, name, location) instantly.
- Validated info is sent to the ONCall system for case management.
- ONCall agents review the case for dispatch relevance.
- Missing info may require dispatch to research tire preferences or contact the driver.
- Once the case is in progress, the API sends updates back to the client.
- Clients can view Case Status and the assigned Service Provider.
